DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Cheng et al.

Cheng et al teaches a method for polishing a wafer which is polished by continuously driving a surface late, 101, on which a plurality of polishing pads, 201, made of polyurethane foam, (col. 4, lines 38-39), are stuck, the surface of each pads being provided with a plurality of grooves each extending in the drive direction of the pad, wherein in the sticking step, the polishing pads are stuck on the surface of the plate, (col.5, lines 49-60), in such a manner that the grooves of each of the polishing pads are spaced not to align with the respective grooves of the polishing pad adjacently arranged in the drive direction and therefore are offset by a predetermined distance form the grooves of the polishing pad adjacently arranged, (fig. 5. if the mosaic pads are placed adjacent to each other, the grooves will not align). Cheng et al. also teaches a plurality of grooves extending in the drive direction of the polishing pad which are formed over the entire width, at regular intervals, from edge to edge of the polishing pad in the direction perpendicular to the drive direction, (figs. 4a and 4b), and the grooves extending in the drive direction at an angle relative to the drive direction at regular intervals, (fig. 3b).

Art Unit: 3723

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Naujok was cited to show another example of a polishing pad.
